To gain the most from this transition, it was essential to introduce the new UI of Android Pie to Adobe Photoshop. We began by applying the Android UI pixel-for-pixel to Photoshop, by editing and adjusting all Android UI elements, styles, and colors to achieve consistency between mobile and desktop versions of the software. After exploring all the features and functionality of Photoshop for mobile, we created an Android Point of View (APV) that matches the functionality of the Photoshop touch experience. In other words, we wanted to extend the Android UI to Photoshop. To support Android Pie, we upgraded the software to also support the latest version of Android Studio, and reworked our Android-based modules to reflect the mobile-first design of Android Pie. We reworked the Photoshop layout to be a single screen, thereby reflecting the 16:9 aspect ratio, and we included global style settings (generally, styles from all modules without being overridden by the file inspector). We updated the module behavior with gesture controls (in a similar way to iOS), and we created a new system-wide context menu (Modify→Enter Edit mode) that works as a desktop shortcut on touch devices.
